

Epigenetic Age Acceleration by Brain Region in Substance Use Disorders

Postmortem Analysis with PMI Correction | Total n=108

A

B

C

Post-hoc Pairwise Comparisons (Tukey HSD)

Comparison	Mean Difference (years)	p-value	Significance
Prefrontal Cortex vs Nucleus Accumbens	+1.2	0.024	*
Prefrontal Cortex vs Hippocampus	+2.1	<0.001	***
Nucleus Accumbens vs Hippocampus	+0.9	0.18	NS

*p<0.05, ***p<0.001, NS: Non-significant

Figure X. Regional differences in epigenetic age acceleration among postmortem brain samples from individuals with substance use disorders. Error bars represent 95% confidence intervals.
